Eisenhower Matrix

	Urgent	Not Urgent
Important	Do - (My MVP) ● set up a project in IntelliJ ● capture user inputs from the terminal ● package my code in a separate JAR file ● test to see if my program works ● debug any errors that are found	Schedule ● set up a repository in GitHub ● record a video of what you have done and why ● build up on all the work I did ● test chunks of code at a time
Not Important	Delegate ● Use dedicated command-line interface frameworks, like Picoli and JCommander. ● Also add in the Java Collections Framework. ● java.io ● java.nio, standard and non-blocking input/output APIs for reading and writing files or data streams	Delete ● java.net ● java.net.http, built-in networking tools and a modern HTTP client for web requests
